Introducing the DPA d:fine™ single-ear headset microphone

Improving on a classic – the best just got better

The DPA d:fine™ headset microphones radically update the design of DPA's 4066 and 4088 models widely used by the international theatre, broadcast and conference markets.

Named to reflect the headset mics' accurate audio definition and natural sonic characteristics, d:fine™ sets a new standard in single-ear headsets. Designed to stay in place no matter the challenge, d:fine ensures a great performance.

Small footprint, high performance

DPA d:fine™ headset mics feature DPA's tried and tested condenser miniature capsule in a sleek housing with a newly designed single-ear mount. Created for high performance with a small footprint, the DPA d:fine features superior transparency and a choice of wind-shields to reduce sensitivity to wind and pop noise.

Directional and omnidirectional

DPA d:fine™ is available in directional and omnidirectional versions. Choose a directional headset if background noise or feedback is an issue.

Comfortable left and right ear mounting

DPA d:fine™ headset mics can be worn on the left or the right ear, and the ingenious new earhook mount easily fits all ear shapes and sizes. It is available in two colors: beige and black.

Limitless connectivity

DPA d:fine™ features a replaceable cable, and the versatile MicroDot solution effectively multiplies your microphone inventory. Using a DPA adapter you can use the DPA d:fine™ headset mics on nearly any professional wireless system available, plus on cable.

Key Features

Comfortable left and right ear mounting | Clear and transparent sound | Low wind and pop sensitivity | Small footprint

d:fine™
